

ALSPEC LOUVRES

ALSPEC Design

ALSPEC Louvres are designed to allow you full control over air flow and light, with the touch of the easy to use operating handles. When closed the louvres enable the air flow from your air-conditioning to operate correctly and effectively.

ALSPEC Louvres use an industry standard snap fit which easily accommodates louvre galleries from 102mm to 152mm blade widths without the need for screw fixing. The integrated screen channel allows the easy fitment of insect or security screens.

The ALSPEC Louvre range is designed to integrate with many of the other ALSPEC Architectural product ranges and offers a complete flexible solution for residential and commercial louvre installations.

ALSPEC Louvres have all been tested to Australian Standards AS2047-1999.
